Our brave marsonauts may face the most monotonous phase of their mission, but they're not bored because they are not boring! Have a look at their inventive cookery to celebrate their one full year in the isolation!

In early June the Mars500 crew celebrated their one full year inside the modules simulating an interplanetary spaceship. They are now flying virtually back to Earth and due to a delay in communications, introduced to make the simulation more real, some material reaches the outside world slowly. As they get nearer to Earth the communications delayed is reduced.

By September the ship will only be only two months away from the Earth.
